M3 Feedback and Plan

====== Home Page ===============

-Make sure images are royalty free

-Put contact landlord button inside listing cards

-Put title beneath navbar (purpose of site {1 -liner})

-State at top of home page that these listings are 'available for rent'

-Make sure the height of cards are the same

-Make images clickable for listings

========= Navbar ============

-Shrink Navbar

-Expand menu on right navbar (Post, About, Login/Register should be spaced out more)

-Move about to navbar

======== Listing Details=================

-Standardize colors on entire website so they are consistent

-Put Contact Landlord button on bottom right of listing item page (item.ejs) and make button bigger

- Show (1-10 out of 50) or something like this in index.ejs page

========= Post Page===============

-Change (Create a listing to Post a listing)

-change dropdown on Post page to dynamically populate from database

- ONLY allow users to upload a single image for listing (for now)

-Remove placeholder image

-Make form slightly wider

-make mandatory fields (* red for required fields) add validation

-force login when post is clicked and user is not logged in

====== Dashboard ============

{Tenant/Landlord}

-My Listings | My Messages (No Reply needed)

-Show all listings and allow delete.

{Admin}

-Admin gets pending listings to approve

{Everyone}

-Add Post listing to dashboard

========Login/Registration Modal =============

-Change 'Sign Up' to 'Register' on Registration page

========Registration ================

-Make a link for 'terms' – doesn't need to link anywhere

-Add captcha instead of "Are You Human? 'Yes'"

-Make 'Search' and 'List' in bold to indicate

Messages ========= (this will be a popup/modal for each listing on index.ejs)

===== Back End Tweaks ===========

-Add distance filter

-Make listings have real information in database (good titles)
